

MENGES UPDATES ROLLER CATALOG

Menges Roller Company introduces their UPDATED Roller Catalog featuring Live and Dead Shaft Idlers, Web Spreaders, Custom Cores and Rubber Selection Guide.

The Live and Dead Shaft Idler sections offer a choice of either Steel or Aluminum rollers in a variety of sizes, and with NEW, easy to understand part numbers, rollers can easily be ordered and reordered. Both the Live and Dead Shaft Aluminum Idlers can be rubber covered, anodized or hard coated for extra durability or for added grip. The Steel Live and Dead Shaft rollers can be rubber covered, chrome plated or hard coated, to protect the rollers from corrosion or increase coefficient of friction.

The Menges Roller Catalog Web Spreader section has pricing for several sizes, groove configurations, and compounds to accommodate almost any type of web or substrate. Rubber and Aluminum Herringbone Web Spreaders are also available. Recommended Operating Guidelines as well as information on Web Spreader placement is provided.

The Custom Core Section discusses material selection, balancing, crowning and custom grooving of any type of roller. And the Rubber Covering Selection Guide advises customers of solvent resistance and the physical properties of rubber, and makes recommendations as to which rubber covering should be used in various applications.

For over 39 years MENGES ROLLER COMPANY has specialized in the fabrication and rubber covering of rollers for the printing, metal processing, converting, textile, paper and plastics industries. As a single-source roller manufacturer, MENGES provides new and replacement rollers along with dynamic balancing, parabolic crowning, and precision grooving. Industry specific and proprietary rubber compounds are available.
