

MENGES INTRODUCES SUPER TOUGH COAT FOR METAL AND PAPER INDUSTRIES AND OTHER OILY APPLICATIONS

Menges Roller Company introduces their exclusive NEWSuper ToughCoat specially formulated roller covering designed to eliminate premature roller wear, cuts, and glaze buildup. Super ToughCoat roller covering is designed for the metal and paper industries, and for oily applications that require a tough, non-tear, long wearing covering with low maintenance.

Super ToughCoat lasts 3-4 times longer and outperforms other roller compounds such as Hypalon and Neoprene. Super ToughCoat's high coefficient of friction and non-glaze surface provides excellent gripping characteristics and exceptional cut and abrasion resistance. Nicks and surface imperfections can be easily ground out and clean up time is minimal because of Super ToughCoat's chemical and solvent resistance.

For over 39 years MENGES ROLLER COMPANY has specialized in fabricating and rubber covering rollers for the printing, converting, metal processing, plastics, paper and textile industries. As a single-source roller manufacturer, MENGES repairs, regrinds, and recovers rollers in addition to supplying new rollers to OEMs and end users.
